D-6-4 Reflectivity
risk visual...

Dear Dr Bradshaw

Please find attached an assessment of reflectivity/glare risk from the Solar PV site to the Park as requested. The Visual specialist found that the answer could be given more simply than originally anticipated i.e. that all of the internal Augrabies Park roads and Viewsites would be out of range of reflectivity/glare risk and only just after sunrise for a section of the public the road between Blouputs and the Orange River would be in range of glare/reflectivity risk. This road is not used by Park visitors.

Yours sincerely,

Philip Rosenthal
